NIGRIDER TN-Q

NIGRIDER TN-Q is a high quality lubricant of polymer type for lubrication of chains, applied by dipping while in heated. The product is mainly used for lubrication of motor cycle chains especially those demanded of high performance (spreading).

By altering heating temperature to apply, it can be controlled of finished condition and performance provided.

The product is most suitable for lubrication of those chains operated under heavy load and high-speed.

TYPICAL PROPERTIES

Test Items	Typical Data	Test Method
Appearance, Raw Fluid	Light yellow colored pasty	Visually observed
Penetration (25°C, Unworked)	135	JIS K 2235 5.10
Melting Point °C	84.6	JIS K 2235 5.3
Flash Point (C.O.C.) °C	290	JIS K 2265
Salt Spray Test (R chain 50)	3 h -- Pass	NTM-0114

USES

1. For chains of medium to large size motor cycles.
2. For general chains operated at high-speed and/or heavy load.

APPLICATING METHOD

For application on chains, dip the chains into heated (100~130°C) lubricant for a specific time (after finished of bubbling). Lift and cool the chains for finishing. It would be better if the chains were cleaned and preheated in advance to dipping. It is also recommended to stir during dipping process to promote efficiency.

Filtration at regular interval is recommended to extend service life of the product.
